

ARMETLINA

30+ years

1996

NOW

With over 30 years of experience, we are a leading Lithuanian manufacturer of medium and low-voltage electrical equipment and metal enclosures. We manufacture the equipment that DSOs, TSOs, and renewable energy developers rely on.

Expertise powered by people

We have 100+ dedicated employees, providing the manpower needed to handle large-scale manufacturing while staying flexible enough to adapt to your specific project requirements.

How do we ensure quality?

We meet international manufacturing standards such as ISO 9001, ISO 14001, and ISO 45001.

Certified and Tested Products

We design our products in accordance with IEC standards.

Core product range

Prefabricated Substations (Kiosks): Non-walk-in designs featuring a heavy-duty sheet metal body and roof, built on a robust concrete foundation. Manufactured in strict compliance with the EN IEC 62271-202:2022 standard.

E-Houses & Technical Houses: Modular, walk-in enclosures made from high-quality sandwich panels. Designed for easy on-site expansion and superior protection of sensitive electronics.

Switchgear & Controlgear Assemblies (Cubicle Type): Manufactured in strict accordance with the IEC 61439-2 standard, these low-voltage assemblies are robust, enclosed cubicle units designed for industrial power distribution and motor control centers.

PENDAs (Public Electricity Network Distribution Assemblies): Manufactured in high volumes and strict compliance with the IEC 61439-5 standard, our low-voltage assemblies (PENDA-O type) are designed for the distribution of electrical energy in three-phase systems (up to 1000 V AC or 1500 V DC).

We can be your manufacturing and OEM partner.

Complete Flexibility: Whether you need a single custom sheet metal part, an empty assembled enclosure, or a fully wired and tested electrical system, **we have the capacity to deliver.**

End-to-End Manufacturing

Sheet metal laser cutting

We use industry-leading Prima Power and Trumpf TruLaser machines to provide high-precision cutting for steel, aluminum, copper, and bronze. Our automated Prima Power line is optimized for high-speed processing up to 8 mm, while the standalone TruLaser handles heavy-duty plates up to 25 mm. This setup allows us to process everything from thin-gauge sheets to large plates within a 3000 x 1500 mm working area.

CNC Sheet metal bending

We provide high-precision bending for steel, aluminum, and stainless steel up to 3000 mm in length. Using automated prima power and manual CNC machines, we handle complex folds with absolute accuracy and fast lead times for both prototypes and high-volume production.

Laser cutting and milling of various plastics

We offer professional CNC milling, laser cutting, and engraving services for various types of plastics. Our in-house facility can implement diverse projects requiring plastic processing to complement your equipment and enclosure needs.

Engineering Services

Our in-house electrical and mechanical engineers provide end-to-end support for your projects, ensuring seamless integration from initial design to final production.

Metal welding

Based on your specific requirements, our experts will select the appropriate welding method for your project.

Powder coating

We provide professional powder coating services using the highest quality paints and the latest technologies to ensure a durable, long-lasting finish. Our facility handles a wide range of component sizes with heating oven dimensions of 4000 x 2200 x 2300 mm, delivering precision results in any RAL color or texture to meet your project's specific needs.

Assembly of electrical equipment

We carry out assembly of electrical equipment of varying complexity, from power distribution cabinets to automatic control devices.
