Capability Statement

Heavy industrial manufacturing & mechanical systems

Specialization

Large-scale welded steel structures, precision-machined fabrications, and complete mechanical assemblies for high-performance industrial applications.

Product Portfolio

Complex welded steel structures, precision-machined components, machine frames, electromechanical housings, stator and rotor components, bearing housings, generator and motor structures, support frames, transport structures, piping systems, machine bases, heavy-duty welded fabrications, and custom-engineered industrial assemblies.

Key Industries

Electric motors and generators, power generation, renewable energy, defence, railway, heavy machinery, mining, marine, and industrial equipment manufacturing.

Manufacturing Capabilities

Engineering support, certified welding, large-scale machining, CNC milling and turning, assembly, testing, and complete project execution from prototype to serial production.
