SOLNET GROUP

FUTURE PROOF SOLAR

COMPANY PRESENTATION

A highly experienced, European-wide provider of smart solar solutions with over 1000 completed C&I projects. Solnet specializes in on-site, near-site and utility scale solar projects, handling a range of challenging sites from greenhouses to heavy industry. Our strong track-record includes world-class references, with multiple frame agreements with Fortune 500 companies. Our Future Proof Solar concept includes advanced volatility market services.

MAIN OFFICES

Effortless Solar Energy

Solnet simplifies solar energy purchasing by expertly handling every step, from design to installation and comprehensive O&M services.

International Partner

Solnet provides comprehensive support for your solar projects throughout Europe. We take pride in the lasting partnerships we've built with our loyal C&I customers.

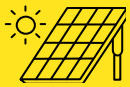

Innovative Solar Solutions

Our smart solar solutions provide you with greater benefits. We continuously enhance our products and services to meet the evolving needs of the future.

Sustainable ROI Solutions

We are committed to helping you achieve your sustainability and energy efficiency goals while ensuring a strong ROI.

Safe Solar Operations

Solnet's smart solar solutions ensure safe operation of your solar plant, with automatic fault detection. Remote monitoring and control further enhance safety.

Solnet Group

10 years since establishment (2014), now one of Europe's fastest-growing energy companies and the largest Finnish-origin PV company.

100 Employees in three countries.

1000 commercial and industrial solar projects delivered across Europe.

MAKE AN IMPACT WITH SOLNET

Solnet Group is a leading service provider of smart on-site solar solutions in Europe, with a strong focus on ROI and secure functional asset management. Our best-in-class references include DHL, DB Schenker, CBRE and a big five tech companyWe deliver turnkey solutions across Europe, managing multiple countries and sites simultaneously.

Solnet's Mission

Our core focus is to expand our business exponentially together with our international customers and partners. Solnet's mission is simple; to make solar energy as easy as possible for our customers and delivering energy that is cleaner and cheaper than energy procured from the grid.

Trusted by industry leaders around Europe. We help our clients achieve their sustainability goals, and are proud to be recognized as one of Europe's Fastest Growing Companies by the Financial Times.

SOLNET | SERVICES

FUTURE-PROOF SOLAR SOLUTIONS

Solnet endeavors to make solar power as easy, as bankable and as safe as possible for our customers. We offer full-service turn-key solutions for solar and energy storage in Europe.

SOLAR SOLUTIONS

Roof-top solar, Green-roof solar

Solnet provides smart solar solutions tailored for both roof-top and green-roof installations. With extensive experience across a variety of challenging sites, we ensure that even green roofs, which require specific adjustments, can maximize solar energy production.

Facade (outer wall) solar

This system integrates solar panels into facades, turning walls into energy-generating surfaces. Ideal for high-rise buildings with limited roof space, these panels boost sustainability and enhance property value by producing significant annual energy.

Near-site solar (Field installation)

Field installation next to a site allows solar power generation directly connected to the site, with no transmission costs. This setup offers an ideal option for businesses looking to utilize adjacent fields for cost efficient energy generation.

Car-port solar (Parking lot)

Parking lot solar installations are dual-purpose structures that provide shade and rain/snow protection for parked vehicles while simultaneously generating clean, renewable energy. In this way, your parking lots can be changed from a sunk cost into an energy generating asset.

ENERGY STORAGE & ENERGY MARKET SOLUTIONS

Energy storage solutions play a crucial role in enhancing grid reliability, integrating renewable energy, and optimizing energy use. Solnet's advanced energy storage systems can e.g. cut consumption peaks, help in expansion of operations despite the grid congestion, store excess solar power for later use and thus ensure around-the-clock availability. This improves energy flexibility, cuts your electricity costs, reduces dependence on the grid, and strengthens resilience against disruptions.

Additionally, these systems enable businesses to participate in electricity markets, offering services like reserve market participation and energy arbitrage, further optimizing energy usage, costs related to electricity and sustainability efforts.

OPERATION & MAINTENANCE SERVICES (O&M)

Solnet provides comprehensive Operation & Maintenance (O&M) services to ensure the long-term performance and efficiency of solar power plants. With cloud-based monitoring platforms, we offer real-time data tracking and immediate fault detection, reducing downtime and minimizing maintenance costs. Our O&M services also include system optimization and safety features like panel-level monitoring and automatic shutdowns, ensuring safe operations.

These proactive measures help protect your investment by guaranteeing peak performance and consistent, cost-efficient energy delivery.

ADDITIONAL SERVICES WE OFFER

- Solar Energy System Design
- Installation
- Energy Management
- Project Development
- Utility Scale Solar Parks
