YOUR EVENT CARPET DOESN'T HAVE TO BECOME WASTE.

WE RECYCLE EVENT CARPET.

Every exhibition, conference, activation and event creates materials that have to go somewhere once the doors close.

For event carpet, the traditional options have often been incineration, landfill or export.

Blu Sky offers another route.

HOW IT WORKS

1 

COLLECT
Event carpet is captured from a named event and venue.

2 

IDENTIFY
Material is assigned a unique batch ID for traceability.

3 

PROCESS
Carpet is mechanically reprocessed using controlled processing and quality procedures.

4 

RECOVER
Usable polymer is converted into recycled material for downstream applications.

5 

VERIFY
Outputs, residues and final destinations are reconciled through **VeriPur LoopTrace**.

6 

TREAT
The customer receives evidence of the material journey and its environmental outcome.

CIRCULARITY THAT GOES BEYOND THE CLAIM.

Less reliance in Incineration
A lower-impact alternative to burning event carpet.

Recovered polymer returned to circulation
Valuable PET/PP retained in the supply chain.

Documented chain of custody
End-to-end traceability from event to final fate.

Evidence for sustainability and Scope 3 reporting
Defensible data for ESG and corporate reporting.

Event-to-fate visibility
Clear insight on what happens to every tonne.

THE EVENT ENDS.

THE MATERIAL JOURNEY DOESN'T.

Make your next event part of a more transparent, measurable circular economy.
